

CRAFT HUT SPREADER BAR

The three-section Craft Hut spreader bar has been slightly reconfigured but will function the same as the Newton Display Products original.

In order to minimize the risk to our workers of welding galvanized metal, we have changed to a bolted-on hook. The hooks are shipped to you with the lock-nut and bolt loose. You must rotate the hook to the extended position and tighten the nut using wrenches or pliers.

The nuts are locking nuts so once you've tightened them, they will not come loose.
