

Lower Single Stabilizer Bar for EZ-Up and other Pop-Up Canopies

Instructions for Use

Parts List:

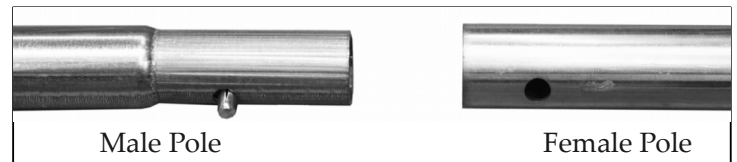

- (2) EZ StaBar Ell Joints
- (1) Male pole sections, 61" long
- (1) Female pole sections, 57" long
- (2) Thumbscrews – finger tighten only

EZ StaBar Ell

1. Set up canopy as usual. Slip EZ Ell Joints onto the bottoms of two legs. Tighten thumbscrews until the joints are held in place against the legs. Finger tighten only – although the joint will flare slightly as you tighten, it is not necessary to apply great pressure when tightening.

2. Connect male pole sections to female pole sections by clicking together at center to form a StaBar pole.

3. Click StaBar pole into StaBar Ell Joints. You may need to adjust the position of the joints on the legs in order to keep StaBar level if you've shortened any of the canopy legs to compensate for uneven terrain. This should be done prior to inserting the StaBar pole.
